2. SPECIFIC INFORMATION

A. Game Adjustments.

SOUND VOLUME: The sound volume level is adjustable by turning the potentiometer VR1 on the main logic pcb until the desired volume level is attained. Turn the potentiometer clockwise to increase the sound volume.

POWER SUPPLY: The switching regulator's +5 volt output is adjustable by turning the potentiometer VR1. This adjustment should only be performed while measuring the +5 volts with a DIGITAL MULTIMETER at the LOGIC PCB, not at the switching regulator!

CAUTION: THIS PROCEDURE SHOULD ONLY BE ATTEMPTED BY QUALIFIED SERVICE PERSONNEL DUE TO THE EXTREME RISK OF PERSONAL INJURY AND/OR DAMAGE TO THE GAME ELECTRONICS.

POWER SWITCH AND FUSE INFORMATION: The Power Supply assembly features an ON/OFF mounted on the switch bracket and accessible from the lower rear of the cabinet. This switch must be in the OFF position before servicing the game electronics to prevent unwanted electrical shock. There are also two fuses mounted next to the ON/OFF switch. They are labeled as to their required ratings. In the event replacement is required, replace only with fast blow devices.

- * The 3 AMP FAST BLOW fuse is on the 117 VAC line. In the event that this fuse should blow, all power to the game will be removed. Check all harnessing for proper connections and look for obvious damage to monitor, power supply, and logic pcb set before replacing the fuse and applying power.
- * The 1 AMP FAST BLOW fuse is on the +12 VDC line between the switching regulator and the coin door lamps. In the event that this fuse should blow, the lamps will not be illuminated. Check for damaged coin door wiring and/or defective coin door lamps.

B. Operator selectable options.

The Karnov game allows for operator adjustable pricing, bonus lives, difficulty, etc. These are accessed by the two 8 position dipswitches located on the main logic pcb. Tables 1 and 2 outline the available options.

4. WIRING INFORMATION

A. Main Harness wiring diagram.

B. Edge connector pin-out.

The Karnov pcb has a 56 pin JAMMA standard edge connector. Data East adds a suitable EMI filter pcb to make the game comply with FCC regulations and adapt to the Data East harness pin-out configuration.

The edge connector pin-out diagram below represents the JAMMA standard used on the actual game pcb, the one on page 9 is the Data East style harness pin-out used on the EMI filter pcb.
